

CLAIMS

1. An integrally molded carrier for carrying
5 two bottles by their necks, comprising a substantially
planar web having two nodes defining two annular supports
with each annular support having a flexible annular
flange for releasably engaging the necks of the bottles,
wherein the centers of the annular supports are
10 substantially aligned along a common axis, and two
generally U-shaped interlockable members flexibly
attached to said web at each side of said two annular
supports, each of said U-shaped members adapted to engage
the necks of said two bottles at a point below the tops
15 of said two bottles so as to maintain a space between the
lower portions of said two bottles.

2. The carrier of claim 1 wherein said
flexible annular flange is provided with radial ribs
20 extending inwardly of said annular supports.

3. The carrier of claim 2 wherein said
flexible annular flange comprises a frusto-conical
portion.
25

4. The carrier of claim 3 wherein said
flexible annular flange is provided with radial slots.

5. The carrier of claim 4 wherein said
30 flexible annular flange includes substantially flat inner
edge portions.

6. The carrier of claim 5 wherein said annular
supports are provided with circumferential ridges.
35

7. The carrier of claim 6 wherein said web is
provided with ridges along its periphery.

8. The carrier of claim 1 wherein said U-shaped members are provided with male and female interlocking members.

5 9. The carrier of claim 8 wherein said U-shaped male interlocking members are in a staggered arrangement relative to each other.

10 10. The carrier of claim 9 wherein said male interlocking members terminate in barbed latching portions.

11. The carrier of claim 10 made of high density polyethylene.
